

## Prestige Central London Redevelopment

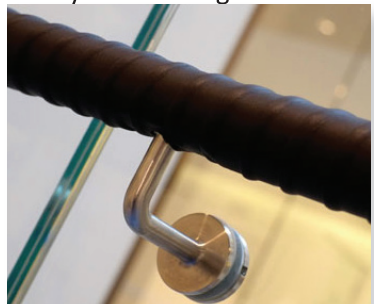

This prestige central London redevelopment has been transformed in a £35 million refurbishment programme, Hawkins Steel Ltd were commissioned to provide technical & design advice for the supply, fabrication and installation of a new helical feature staircase.

The Staircase specification included the following features:

- The staircase had to be floating with all steel supports to be hidden
- Curved glass balustrading
- Bronze handrails and tread infill's
- Leather wrapped handrail
- Turkish Stone treads
- Timber stringers

This was an extremely complex project, with heavy mild steel fabrication and processes. The steel support structure had to be curved to exacting tolerances. The staircase was fabricated by our highly skilled fabricators and trial erected within our workshop facility.

All glass and bronze work was then measured on-site within our facility and then again once installed on-site. All installation was carried out by Hawkins personnel during nights over a 4 week period.
