

Steel Frame and Balcony Structure

Hawkins Projects were awarded the contract at Sylvan Court as part of a sheltered housing scheme to fabricate a steel frame for the house builds and the steel balconies to attach to them

Working from the architect and engineers plans Hawkins Steel produced a 3D drawing model in Teckla, using this all curves and fabrication details were produced.

The steel frame and balconies were fabricated in our Oxfordshire workshop, the balconies were then fully welded and hot dip galvanized.

All steel work was then taken to site and installed as per the contractor's construction plan. The installation was carried out using crane contract lifts by our in house installation team.
