

Building Façade Refurbishment

Hawkins roofing limited were awarded the contract to create a new front entrance to this industrial building based in Abingdon, Oxfordshire

Demolition of a warehouse unit that intersected this building had already taken place leaving a mixture of different cladding types and substructures on show.

Hawkins Roofing were required to design and install new system to match two differing cladding types already in use on the building. With the previous cladding panels no longer available we were asked to source another option to match what was on the rest of the building.

Our highly experienced design team were able produce a design that precisely matched the client's expectation for the external envelope, whilst also increasing the thermal efficiency of the building.

Utilising specialist access and lifting equipment were able to complete the installation of the vibrant façade both quickly and safely causing no disruption to the live business that was operating internally.
